Art Unit

2186

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**Status**

- 1) ☒ Responsive to communication(s) filed on 13 February 2001.
- 2a) ☐ This action is **FINAL**.                      2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

**Disposition of Claims**

- 4) ☒ Claim(s) 1-31 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1-31 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

**Application Papers**

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 24 May 2001 is/are: a) ☐ accepted or b) ☒ objected to by the Examiner.
- Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- 11) ☐ The proposed drawing correction filed on \_\_\_\_\_ is: a) ☐ approved b) ☐ disapproved by the Examiner.
- If approved, corrected drawings are required in reply to this Office action.
- 12) ☐ The oath or declaration is objected to by the Examiner.

**Priority under 35 U.S.C. §§ 119 and 120**

- 13) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some \* c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- \* See the attached detailed Office action for a list of the certified copies not received.
- 14) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. § 119(e) (to a provisional application).
- a) ☐ The translation of the foreign language provisional application has been received.
- 15) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. §§ 120 and/or 121.

**Attachment(s)**

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO-1449) Paper No(s) \_\_\_\_\_.
- 4) ☐ Interview Summary (PTO-413) Paper No(s). \_\_\_\_\_.
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☐ Other: \_\_\_\_\_.

## DETAILED ACTION

### *Drawings*

1. This application, filed under former 37 CFR 1.60, lacks formal drawings. The informal drawings filed in this application are acceptable for examination purposes. When the application is allowed, applicant will be required to submit new formal drawings. In unusual circumstances, the formal drawings from the abandoned parent application may be transferred by the grant of a petition under 37 CFR 1.182.

### *Claim Rejections - 35 USC § 103*

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Art Unit: 2186

3. Claims 1-31 are rejected under 35 U.S.C. 103(a) as being unpatentable over Stracovsky et al. (US PAT. 6,453,370 hereinafter Stracovsky) in view of Joffe (US PAT. 5,440,523).

Regarding claim 1, Stracovsky discloses a method comprising detecting a write data burst (col. 27 lines 5-23), determining if at least one memory unit is available to receive the write data burst (col. 12 lines 29-56), writing the write data burst to the at least one memory unit if the at least one memory unit is available to receive data (col. 9 lines 33-63 and col. 15 lines 4-8), concurrently with activating the at least one memory unit to receive data, if the at least one memory unit is not available to receive data, i.e., activating any of the available memory bank based on the result of comparison between the status stores in the tag register and the requested command (col. 11 line 29 through col. 12 line 24 and col. 20 lines 26-45) and further corresponding to each data burst (col. 21 line 51 through col. 22 line 28). Stracovsky differs from the claimed invention in not specifically teaches storing a first portion of the write data burst in a buffer, and writing a second portion of the write data burst to the at least one memory unit when the at least one memory unit is available to receive data, writing the first portion of the write data burst from the buffer to the at least one memory unit after writing the second portion of the write data burst. However Joffe teaches in a multi-port shared memory system (18, figure 40) comprising a plurality of buffers (24-1 – 24-k) which temporarily stores data during transfer of the burst data between respective input/output ports (20-1 – 20-k) and the memory (26, figure 4), each buffer is able to stores subset of bit for every data word burst (figure 5 and col. 4 line 50 through col. 5 line 11), and can transfer in parallel to the memory in a consecutive clock cycles (col. 6 line 40 through col. 7 line 28). Therefore, it would have been obvious to a person of

Art Unit: 2186

ordinary skill in the art at the time the invention was made to modify the shared memory system of Stracovsky in having a buffer to storing the first portion of the write data burst, as per teaching of the buffers (24-1 – 24-k), and writing a second portion of the write data burst to the at least one memory unit when the at least one memory unit is available to receive data, and writing the first portion of the write data burst from the buffer to the at least one memory unit after writing the second portion of the write data burst, as per teaching of writing the data word burst simultaneously in a consecutive order in the multi-port shared memory system of Joffe, because it not only reduces the number of pin connections required to transfer a multi-word burst of data between a port and a shared memory, but also increase the a multi-word burst of data access which can complete in a single memory access cycle in order to reduce the latency and collision of the memory access.

Regarding claim 2, the difference between Stracovsky and the claims is the claims specifically recite the write data burst comprises at least eight data words. However, having this sized data burst does not have a disclosed purpose nor is this size disclosed to overcome any deficiencies in the prior art. As such, the data burst may have been of any size. In addition, Stracovsky discloses the burst data transfer comprises four data streams (col. 27 lines 5-24), so as the example of Joffe discloses that there are thirty-two words per burst ( $n=32$ ) and  $m$  bits per word (col. 7 lines 2-4 and col. 4 line 67 through col. 5 line 5), the ordinary artisan would realize a possible data burst capacity increase as the current technology would warrant. Accordingly, it would have been an obvious matter of design choice to utilize the system of Stracovsky wherein the write data burst comprises four data streams, as disclosed above, since applicant has not

Art Unit: 2186

disclosed that at least eight data words, as opposed to other sizes, overcomes a deficiency in the prior art or is for any stated purpose.

Regarding claim 3, Stracovsky discloses the first portion write data burst comprise at least one data word (col. 13 lines 1-3).

Regarding claim 4, Stracovsky discloses the write data burst comprises a write data burst during a processor's burst write mode (col. 27 lines 5-23).

Regarding claim 5, Stracovsky discloses the method is used in shared bus architecture (col. 1 lines 32-35).

Regarding claim 6, Stracovsky differs from the claimed invention in not specifically teaches the first portion of the write data burst and the second portion of the write data burst are stored in contiguous memory locations. However, Joffe teaches in the multi-port shared memory system (18, figure 4) comprising a plurality of buffer (24-1 – 24-k) which temporarily stores data during transfer of the data between respective ports, and simultaneously transferred to memory (26) in consecutive order as show in figure 5 and (col. 4 line 50 through col. 5 line 11 and col. 6 line 40 through col. 7 line 28). Therefore, it would have been obvious to a person of ordinary skill in the art at the time the invention was made to modify the shared memory system of Stracovsky in having the first portion of the write data burst and the second portion of the write data burst are stored in contiguous memory locations, as per teaching by the multi-port shared memory system of Joffe, because it not only reduces the number of pin connections required to transfer a multi-word burst of data between a port and a shared memory, but also increase the a multi-word burst of data access which can complete in a single memory access cycle in order to reduce the latency and collision of the memory access.

Art Unit: 2186

Regarding claim 7, Stracovsky discloses the first portion of the write data burst and the second portion of the write data burst are stored in non-contiguous memory location, i.e., non-sequential access which based on the availability and status of each memory bank, and the memory controller further comprising a reordering circuitry to re-generate the order of access which related to the on the availability and status of each memory bank (col. 19 lines 11-62).

Regarding claim 8, Stracovsky discloses the at least one memory unit comprise a Synchronous Dynamic Random Access Memory (SDRAM) bank (col. 6 lines 40-42 and col. 29 lines 44-45).

Regarding claims 9, 17, 20, 24 and 28 the limitations of the claim are rejected as the same reasons set forth in claim 1.

Regarding claims 10, 18, 25 and 29 the limitations of the claim are rejected as the same reasons set forth in claim 2.

Regarding claim 11, 19, 22, 26 and 30 the limitations of the claim are rejected as the same reasons set forth in claim 3.

Regarding claim 12 and 21, the limitations of the claim are rejected as the same reasons set forth in claim 4.

Regarding claim 13, 23 and 27, the limitations of the claim are rejected as the same reasons set forth in claim 5.

Regarding claim 14, the limitations of the claim are rejected as the same reasons set forth in claim 6.

Regarding claim 15, the limitations of the claim are rejected as the same reasons set forth in claim 7.

Art Unit: 2186

Regarding claims 16 and 31, the limitations of the claim are rejected as the same reasons set forth in claim 8.

***Conclusion***

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Gentry et al. (US PAT. 5,758,089) disclose method and apparatus for burst transferring ATM packet header and data to a host computer system (abstract and col. 1 line 65 through col. 2 line 54).

Stracovsky et al. (US PAT. 6,216,178) discloses methods and apparatus for detecting the collision of data on a data bus in case of out-of-order memory accesses of different times of memory access execution (abstract).

Clebowicz (EP 0 438, 274 A2) discloses the bursted and non-bursting data router performs input data de-shuffling and output data formatting and shuffling and operates with both bursted and non-bursting input and output data using only one input buffer per input channel and one frame buffer per output channel (col. 2 line 21-38).

5. Any response to this action should be mailed to:

Commissioner of Patents and Trademarks

Washington, D.C. 20231

Or faxed to:

(703) 746-7239

Art Unit: 2186

Hand-delivered responses should be brought to Crystal Park II, 2121 Crystal Drive,  
Arlington, VA, Fourth Floor (Receptionist).

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Zhuo H. Li whose telephone number is 703-305-3846. The examiner can normally be reached on Tuesday to Friday from 9:30 a.m. to 7:00 p.m. The examiner can also be reached on alternate Monday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Matthew Kim, can be reached on (703) 305-3821.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 305-3900.
